

Attention!!

Repair Industry

Do you have questions about:

- Fixing an IM240 failure
- Fixing an OBD II failure
- The Repair Facility Performance Report

Repair Facility Performance Report

It is your responsibility as a Repair Facility owner and it yours to document this to us.

When your repair facility is tested:

- you will receive the Facility Inspection Report (FIR) report.
- The Repair Facility Report will be used to determine if your facility is in compliance with the requirements of the Repair Facility Performance Report.
- You will be notified of any violations and the date of the next inspection.

For more information, call 1-800-368-6868 or visit our website at www.idot.state.il.us

Would you like to:

- Tour a test station
- Drive your vehicle on the dyne
- Obtain a copy of your shop's repair effectiveness report (your grade)

- Attend  **FREE** seminars on:

"How to fix an IM240 failure"

"How to fix an OBD II failure"

"Shop Management for Emissions Success"

NOV. 05 2004

Things you should know as a Repair Technician

3 0112 115494327

- RDR (drive traces) can be reproduced at the test station or by calling Repair Industry Outreach.

- Always neatly complete the entire repair data section, and don't forget to reference the same shop phone number on all re-tests.

Using a shop stamp will ensure accuracy of your grade.

The form is titled "Required Vehicle Repair Data" and contains several sections for recording repair information. It includes fields for the repair date, the technician's name, the shop's name and phone number, and a section for the repair description. There are also checkboxes for "Repaired by" and "Inspected by". The form is designed to be filled out by a repair technician and then stamped by the shop.

- Use a Voluntary Test to verify the accuracy of your repair before the re-test. Vouchers can be purchased in advance at the test station.
- Call to notify us about any changes to shop or technician information.
- Call for other helpful tips & assistance.
